24 Oktober 2018 14.00

Yth. Presenter Yishpess dan CoIS
ditempat

Sehubungan dengan pelaksanaan Yishpess dan CoIS pada tanggal 26-27 Oktober 2018, kami informasikan kepada calon presenter untuk memperhatikan hal-hal berikut:

1. Presenter membawa bukti pembayaran pada saat registrasi
2. Bagi presenter mohon menyiapkan PPT untuk presentasi selama 10 menit
3. Presenter dimohon memperhatikan jadwal presentasi yang terlampir dalam program book
4. Bagi presenter yang menggunakan komputer OS Apple diharapkan membawa kelengkapan sendiri.
5. Berikut dilampirkan program book seminar

Demikian pemberitahuan ini, kami ucapkan terimakasih.

Our warmest regards,
Seminar Committee

Dear Dr. bambang priyonoadi,

Your abstract has been edited:

Abstract ID:

ABS-136

Please use this "Abstract ID" in all correspondence (instead of abstract title).

Title:

DIFFERENCES INFLUENCE METHODS OF MASSAGE FITNESS FOR POST-PHYSICAL ACTIVITY AND SPORTS
MASAS TO BLOOD PRESSURE, PULSE AND RESPIRATORY FREQUENCY.

Authors:

Dr. Drs. Bambang Priyonoadi, M.Kes. Dr. Ali Satia Graha, S.Pd., M.Kes. Dr. dr. BM. Wara Kushartanti, M.S. Dr. dr.
Rachmah Laksmi Ambardini, M.Kes.

Institutions:

Faculty Of Sport UNY (Study Program Of Sport Science)

Content:

Massage as one form of activity to recover the origin (recovery) is able to reduce the response of physical fatigue, such as the response of blood pressure, pulse or breathing frequency is higher. The new type of massage created in 2012 is the post-physical fitness massage method experienced by the athlete is also effective to reduce the response. Considering there are no supporting research results to the new massage method, therefore, it is necessary to research to see how effective the new method methodology with massage that has been known to its effectiveness is sports massage.

This research is a type of pure experimental research (True Experimental) with pretest-post test design, characterized by replication, randomization and control. The subjects of the study were students of IKOR FIK UNY in 2016 6th semester a total of 27 people (in inclusion from population 54 people) conducted preliminary test, data from preliminary test was used to be divided into 3 groups by ordinal pairing. Sampling pulse rate, blood pressure and respiratory frequency performed for two times after physical activity and after completion of massage treatment with one hour rest.

The target of this research is to know: a) Effect of fitness method after physical activity have effect on change of pulse rate, blood pressure, and breathing frequency, b) Effect of sports massage effectiveness effect on pulse change, blood pressure and breathing frequency, c) Type of post-physical fitness massage method or exercise massage that is most effective against changes in pulse rate, blood pressure and breathing frequency.

The results showed that a) Post-Physical Activity Fitness Mass may decrease Systole Pressure (-10.67 mmHg), decrease Diastole Blood Pressure (6.59 mmHg), decrease pulse rate (135.00 times / min), and decrease respiratory frequency (-17.89 times / min). b) Sports Massage can decrease Blood Pressure Systole (-12.67 mmHg), decrease Diastole Blood Pressure (5 mmHg), decrease pulse rate (-35.22 times / min), and decrease respiratory rate (-13.78 times / mnt), c) Post Physical Fitness Fitness Massage is better for reducing Blood Pressure, Pulse Rate and Respiratory Frequency than Sports Massage (Mean 2.00, LB -12.10 mmHg and UB 16.10 mmHg) and Control Group (Mean 10.00 mmHg, LB -4,10 mmHg and UB 24,10 mmHg).

Conclusion that Post Physical Fitness Activity is very effective for lowering Blood Pressure Systole and Diastole, Pulse Rate, and Respiratory Frequency than Sports Massage and Control group.

Keywords:

ost Physical Fitness Activity Massage, Sports Massage, Blood Pressure, Pulse Rate, and Respiratory Frequency.

Topic:

Sport Science

Presenter:
bambang priyonoadi

Type:
Oral Presentation

The Letter of Acceptance (LoA) can be downloaded from your account,
once your abstract is accepted to be presented.

Thank you.
