Chapter 6

Isomers and Stereochemistry

Disampaikan oleh : Dr. Sri Handayani 2013

Review of Isomerism

- ➤ Isomers Compounds that have the same molecular formula but do not have identical structures.
- ➤ Constitutional Isomers differ in the way their atoms are connected.
- > Stereoisomers differ in the way their atoms are arrange in space.

Constitutional Isomers

constitutional isomers

CH₃CH₂OH ethyl alcohol

and

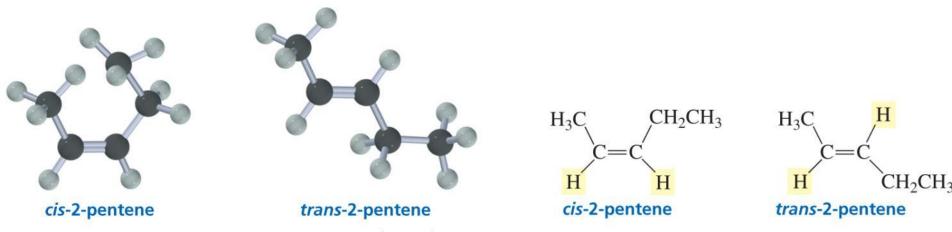

CH₃OCH₃ dimethyl ether CH₃CH₂CH₂CH₂Cl and CH₃CH₂CHCH₃

1-chlorobutane

2-chlorobutane

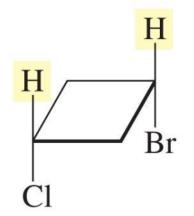

6.1 Cis-trans isomers

➤ Differ in the arrangement of their atoms in space (cannot interconvert)- *Alkenes*.

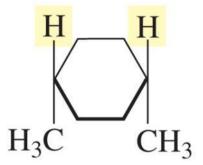

6.1 Cis-trans isomers

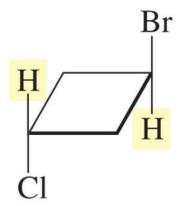

> Cyclic structure.

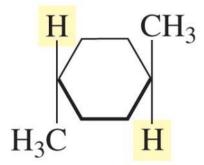

cis-1-bromo-3-chlorocyclobutane

cis-1,4-dimethylcyclohexane

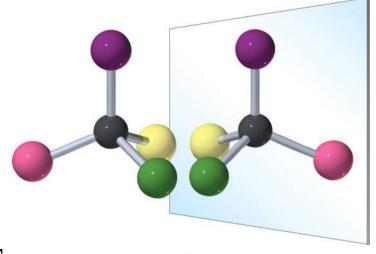

trans-1-bromo-3-chlorocyclobutane

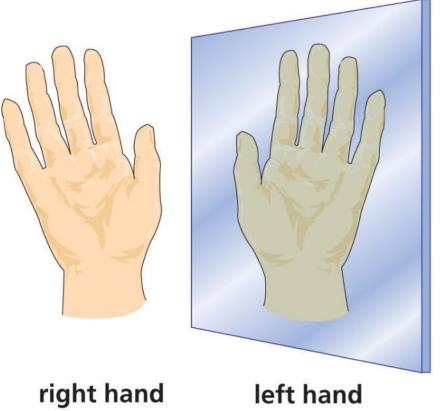

trans-1,4-dimethylcyclohexane

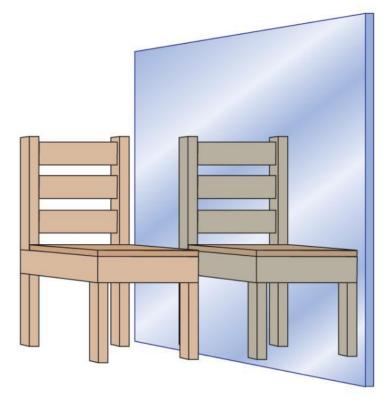

6.2 Chirality

- > Chiral Nonsuperimposable on its mirror image.
- > Achiral Superimposable on its mirror image.
- If a molecule (or object) has a mirror plane or an inversion center, it cannot be chiral.

nonsuperimposable mirror images

> cis-1,3-dimethylcyclopentane

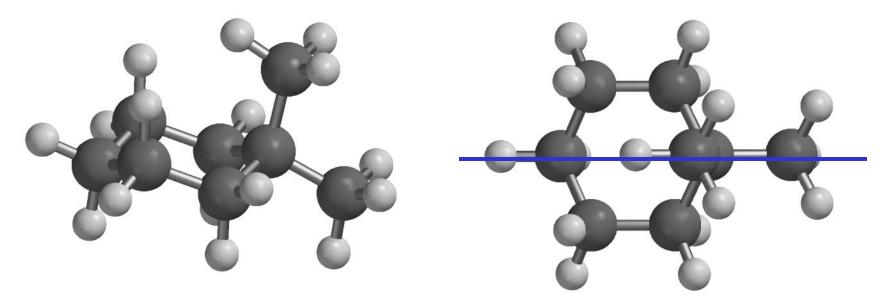

mirror plane

> trans-1,3-dimethylcyclopentane

chiral

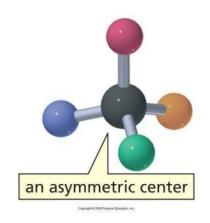

➤ 1,1-dimethylcyclohexane

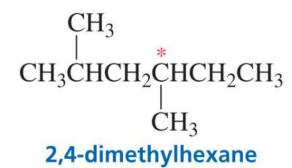

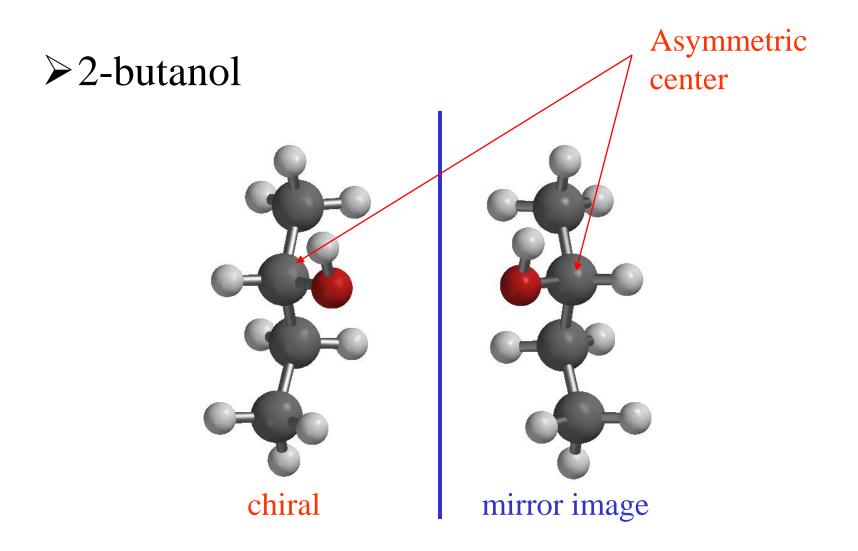

achiral

6.3 Asymmetric centers

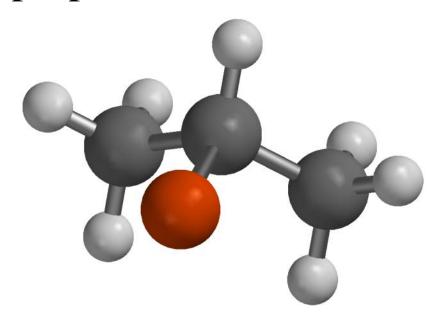

An asymmetric center is an atom that is bonded to four different groups.

➤ 2-bromopropane

achiral

PROBLEM 4◆

Which of the following compounds have an asymmetric center?

a. CH₃CH₂CHCH₃

b. CH₃CH₂CHCH₃ CH₃

CH₃
|
c. CH₃CH₂CCH₂CH₂CH₃
|
Br

d. CH₃CH₂OH

e. CH₃CH₂CHCH₂CH₃

Br

f. CH_2 = $CHCHCH_3$ | NH_2

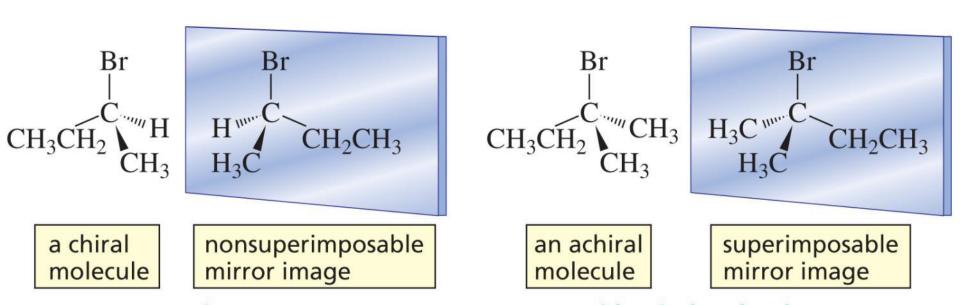

6.4 Isomers with one asymmetric center

2-bromobutane

the two isomers of 2-bromobutane

enantiomers

6.4 Isomers with one asymmetric center

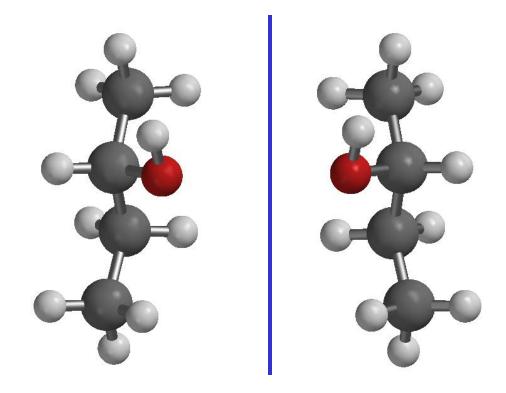

enantiomers

identical molecules

Enantiomers

- A chiral compound and its mirror image are called *enantiomers*.
- ≥2-butanol:

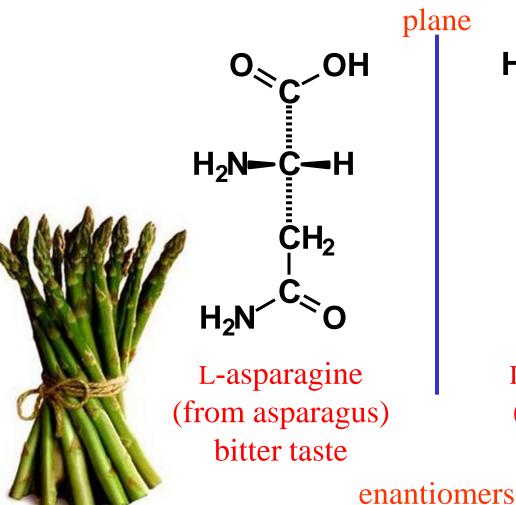

enantiomers

Enantiomers

>Asparagine:

mirror plane

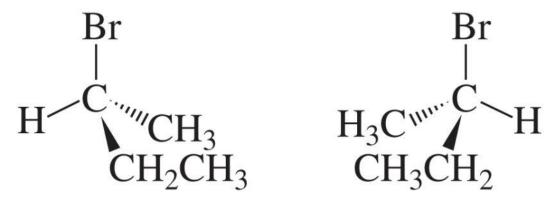

H-C-NH₂ D-asparagine (from vetch) sweet taste

PROBLEM 6◆

Which of the compounds in Problem 4 can exist as enantiomers?

6.5 How to draw enantiomers

perspective formulas of the enantiomers of 2-bromobutane

PROBLEM 7◆

Draw the enantiomers of each of the following compounds using perspective formulas:

 CH_3

Br

CH₃CHCH₂OH **b.** CICH₂CH₂CHCH₂CH₃ **c.** CH₃CHCHCH₃

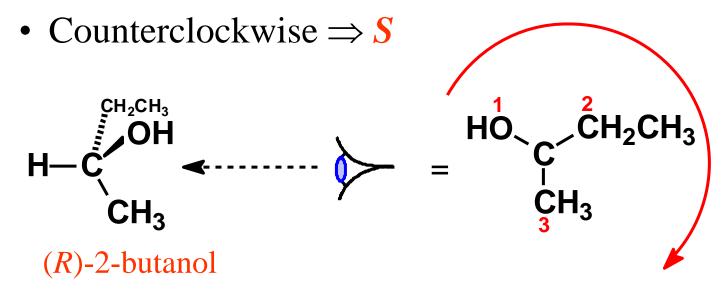

CH₃

6.6 Naming enantiomers: the R,S system

$\triangleright R$ and S

- Assign priorities to the remaining groups based on atomic numbers.
- Clockwise (highest to lowest priority) $\Rightarrow R$

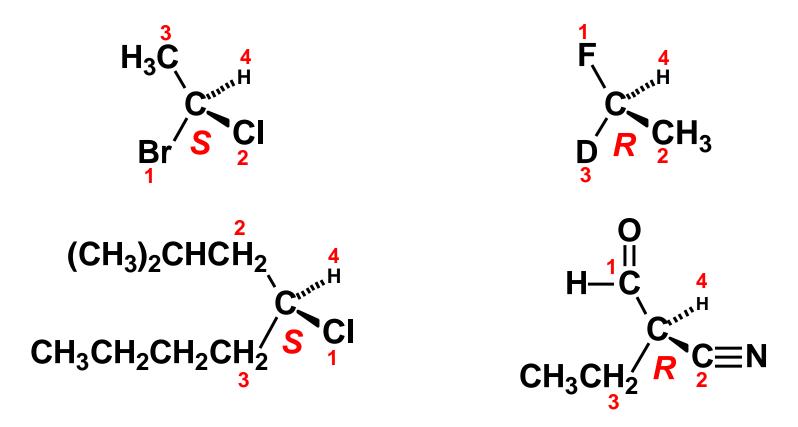

> Assign priority:

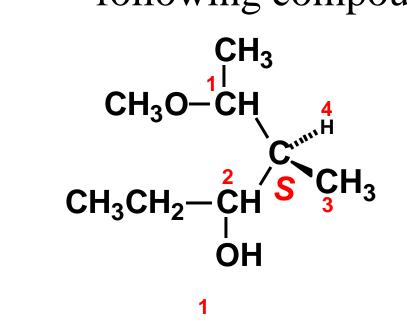

- Atomic number of atom directly bonded.
- If the same atom is bonded, go to the next atom, etc.
- Groups containing multiple bonds are treated as though multiple atoms were attached:

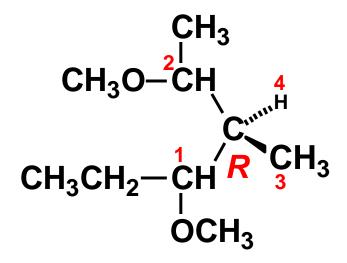

$$C = O = -C - O - C = N = -C - N - C$$

Determine the absolute configuration of the following compounds:

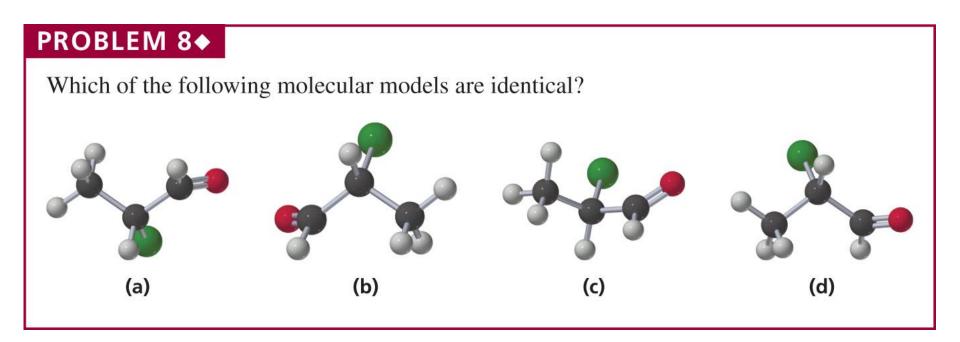

➤ Determine the absolute configuration of the following compounds:

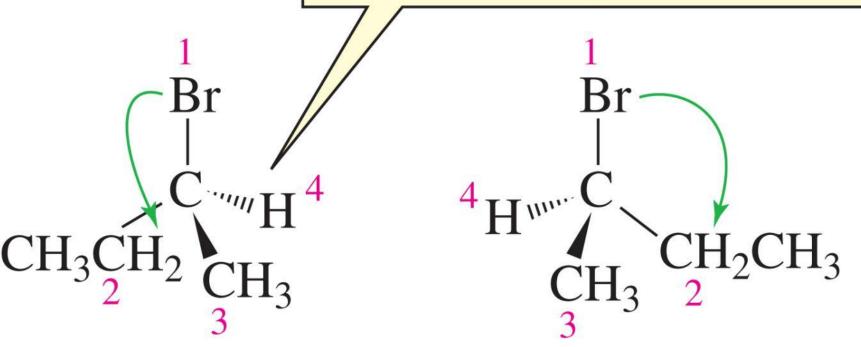

$$CH_2 = CH$$
 C_{M_3}
 CH_3
 CH_3

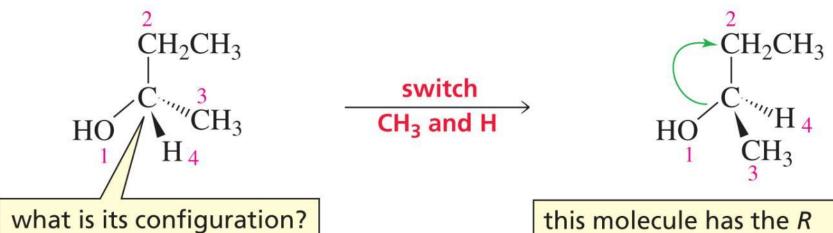

the group with the lowest priority is bonded by a hatched wedge

(S)-2-bromobutane

(R)-2-bromobutane

configuration; therefore, the molecule had the S configuration before the groups were switched

PROBLEM 9◆

Assign relative priorities to the following groups:

a.
$$-CH_2OH$$
 $-CH_3$ $-CH_2CH_2OH$ $-H$

b.
$$-CH=O$$
 $-OH$ $-CH_3$ $-CH_2OH$

c.
$$-\text{CH}(\text{CH}_3)_2$$
 $-\text{CH}_2\text{CH}_2\text{Br}$ $-\text{Cl}$ $-\text{CH}_2\text{CH}_2\text{CH}_2\text{Br}$

d.
$$-CH=CH_2$$
 $-CH_2CH_3$ $-C\equiv CH$ $-CH_3$

PROBLEM 10◆

Indicate whether each of the following structures has the *R* or the *S* configuration:

a. Br COOH

b. HWWOH

PROBLEM 11◆

Name the following compounds:

b.
$$H_3C$$
 C_1
 C_1
 C_1
 C_1

PROBLEM-SOLVING STRATEGY

Do the following structures represent identical molecules or a pair of enantiomers?

The easiest way to find out whether two molecules are enantiomers or identical molecules is to determine their configurations. If one has the *R* configuration and the other has the *S* configuration, they are enantiomers. If they both have the *R* configuration or both have the *S* configuration, they are identical molecules. Because the structure on the left has the *S* configuration and the structure on the right has the *R* configuration, we know that they represent a pair of enantiomers.

Now continue on to Problem 12.

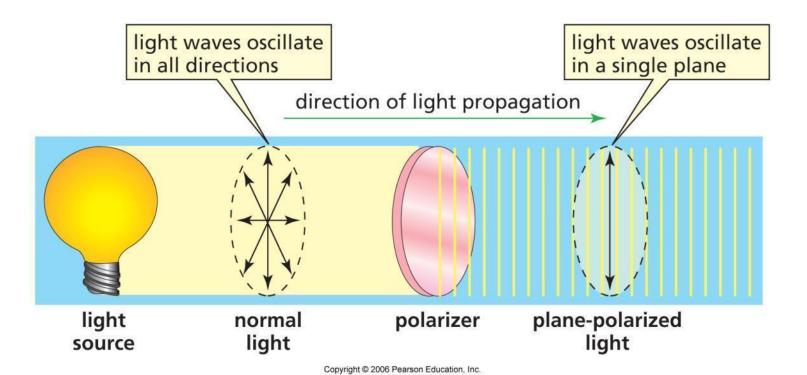

PROBLEM 12◆

Do the following structures represent identical molecules or a pair of enantiomers?

 $\textbf{a.} \begin{array}{c} CH_2Br \\ \textbf{a.} \\ H_3C \\ CH_2CH_3 \end{array} \quad \text{and} \quad \begin{array}{c} Cl \\ CH_2Br \\ CH_3CH_2CH_2Br \\ \end{array} \quad \textbf{b.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{b.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_2CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br \\ CH_3CH_3CH_3 \\ \end{array} \quad \textbf{d.} \quad \begin{array}{c} CH_2Br$

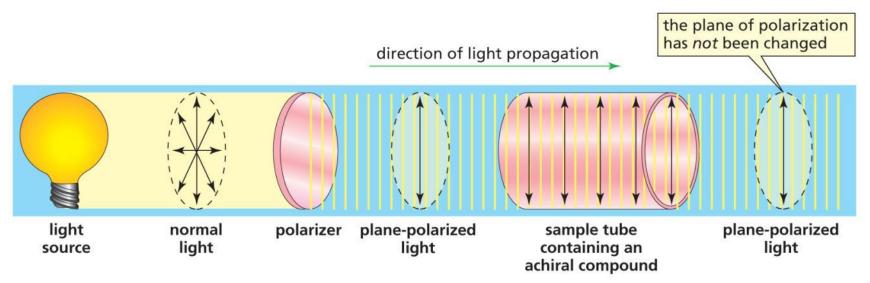

6.7 Chiral compounds are optically active

➤ Plane-polarized light is produced by passing normal light through a polarizer.

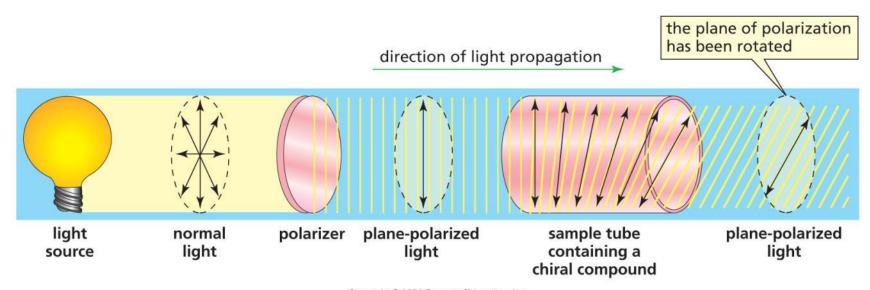

Optical Activity

➤ When plane-polarized light passes through a solution of achiral molecules, the light emerges from the solution with its plane of polarization unchanged.

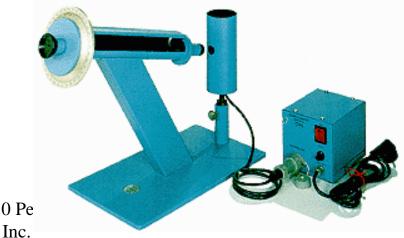

Optical Activity

➤ However, when plane-polarized light passes through a solution of a chiral compound, the light emerges with its plane of polarization changed.

Optical Activity

- ➤ Optical Activity The ability of a compound to rotate the plane of polarized light.
- A compound that rotates the plane of polarization is said to be *optically active*.
- > Chiral compounds are *optically active* and achiral compounds are *optically inactive*.
- > A *polarimeter* is used to make such measurements:
